This sequence represents a fragment of the amyloid beta peptide. The invention relates to the use of peptide compounds for inhibition of purperisation of amyloid beta peptide (ABP), as model substances for polymerisation of amyloid beta peptide (ABP), as model substances for synthesis of ABP-ligands for inhibition of polymerisation of ABP, as a tool for the identification of other organic compounds with similar functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, especially in treatment of Alzheimer's disease associated with mayloidosis, for treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of humolecules with similar properties and/or as ligands for detection of molecules with similar properties and/or as ligands for detection of amyloid deposits using e.g. positron emission tomography.

Beta-amyloid inhibitor useful for treating Alzheimer's disease Example, Column 7; 15pp; English.

TXEXEXEXESSSSX (S)

The present invention describes a beta-amyloid inhibitor peptide. Beta-amyloid inhibitors have neuroprotective and mootropic properties. The inhibitor peptides are useful for the treatment of Alzheimer's disease. The present sequence represents a beta-amyloid recognition peptide used in the exemplification of present invention.

Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering.antigenic all-D peptide, e.g. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity

Disclosure; Page 11; 31pp; English

The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AAB82622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues with other amino acid residues or non-amino acid fragments. Vaccines of the invention residues or non-amino acid fragments. Vaccines of the invention connected tragments. Properties synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of self' proteins. The all-D peptides synthesised from the configuration of an amyloid protein, e.g. the beta-sheet region or GAG-binding site region, the amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all-D peptides and immunogenic peptidomimetics. Examples include all-D peptides and immunogenic peptidomimetics. Examples include all-D certivative peptides given in AAB82623-64. The vaccine elicits a perferential TH-1 response, preventing fibrillogenesis and the all-D perferential TH-1 response, preventing fibrillogenesis and perferential TH-1 response. dissociated cellular toxicity. The amyloid related diseases may be localised amyloidusis, e.g. diabetes type II, neurodegenerative diseases, e.g. bovine spongiform encephalitis, Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and prion protein related disorders, or systemic amyloidosis associated with chronic infection (e.g. tuberculosis) or chronic inflammation (e.g. tuberculosis) are chronic inflammation (e.g. tuberculosis) and moditerranean fever (FMP) and

                                                                                                                                                         Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       infection (e.g. tuberculosis) or chronic inflammation (e.g. rheumatoid arthritis), familial Mediterranean fever (FMF) as systemic amyloidosis found in long-term haemodialysis paties

Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid protein.

RESULT 8

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety.

The agent is of general formula A.L.(A.l.n k).Z-A.l.a b (1) where

z = 0 + 1; A.t = an amyloid targeting moiety; A.l.n k = a linker
moiety; and A.l.a b = a labelling moiety. Also included are imaging
amyloid deposition or diagnosing an amyloid-related condition in a
patient involving administering (1) the patient, and ultrasound
imaging (1) in the patient to determine the presence of amyloid or
amyloid-related condition, and a kit for preparing a radiopharmaceutical
comprising (1), a reducing agent, a buffering agent, a
transchelating agent, and instructions for the preparation and use of
radiopharmaceutical in the imaging of amyloid or an amyloid-related
condition. The agents are used for imaging amyloid deposition and for
condition. The agents are used for imaging amyloid deposition and for
diagnosing an amyloid related condition e.g. Creutzfeldt-Jakob disease
(CUD), kuru, transmissible cerebral amyloidoses (transmissible virus
dementias), familial CUD, scrapie, transmissible mink encephalopathy,
type II diabetes, primary amyloidosis, faline spongiform encephalopathy,
concrete the patient amyloidosis, faline spongiform encephalopathy,
concrete the agents of the patient of the pat ö New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders prion-mediated diseases, dialysis-related amyloidosis, light chain-related amyloidosis, light chain-related amyloidosis, cerebral amyloid angiopathy. The agents are capable of crossing the blood-brain barrier and are capable of binding specifically to amyloid plaques. The present sequence is a peptide forming the amyloid targeting moiety of the agent of the invention.                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                       The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAUI1648-AAUI1669, AAUI1910 & AAUI1911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a new method of inhibiting cerebral amyloid anglopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid anglopathy, particularly Alzheimer's disease, hereditary hamploid anglopathy, particularly Alzheimer's disease, hereditary hamploid anglopathy, particularly Alzheimer's disease, hereditary hamploid as the present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeca40) inhibitor. The Abeca40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid anglopathy (CAA).
                                       Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                   Peptide #14, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                         Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc modulator compounds of the invention. Beta-amyloid peptide is a 4 cc kilodalton peptide that is the major protein component of amyloid plaques are present both in the brain lesions, and in ct the walls of cerebral blood vessels in Alzheimer's disease patients. CC The amyloid modulators of the invention comprise an amyloidogenic protein or peptide (such as this sequence) coupled directly or indirectly to at least one modifying group. The modifying group is preferably a cyclic, conference, containing group, a containing group, a fluorescein containing group. These cc compounds then modulate the aggregation of these sequences to natural camyloidogenic proteins or peptides when containing group. These cc amyloidogenic proteins or peptides when contacted with the natural camyloidogenic proteins or peptides. The modulator compounds can be used in the treatment of disorders associated with amyloidosis, such as cfamilial amyloidosia polyneuropathy, familial amyloidosis, scrapie, colored cardiac amyloidosis, systemic senile amyloidosis, scrapie, colored containing and deafenses, hereditary cerebral haemorrhage and other types of amyloidosis. The modulators are also useful for the creatment of disorders associated with beta-amyloidosis, especially the containers of disorders associated with beta-amyloidosis, especially creatment of disorders associated with beta-amyloidosis, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW02310-W02332 represent the peptide portions of the beta-amyloid modulator compounds of the invention. Beta-amyloid peptide is a 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for its polymerisation. The invention relates to the use of peptide compounds for inhibition of polymerisation of amyloid beta peptide (ABP), as model substances for synthesis of ABP-ligands for inhibition of polymerisation of ABP, as a tool for the identification of other organic compounds with similar functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, especially in treatment of Alzhaimer's disease associated with amyloidosis, for treatment or prevention of demens in patients with bown's syndrome, for treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of new and known peptide(s) amyloid beta peptide - e.g. for Down's syndrome associated with
                                                                                                                                                                                                      Use of new and known amyloid beta peptide

This sequence represents a fragment of the amyloid beta peptide. I invention relates to the use of peptide compounds for inhibition of polymerisation of amyloid beta peptide (ABP), as model substances synthesis of ABP-ligands for inhibition of polymerisation of ABP,

tool for the identification of other organic compounds with similar functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, especially in treatment of Alzheimer's disease associated with amyloidosis, for treatment or prevention of demens in patients with Down's syndrome, treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands for detection of amyloid deposits using e.g. positron emission tomography.
                                                                                                                                                                                                                                                                                                                                                                   Amyloid beta peptide; Alzheimer's disease; polymerisation; aggregation; positron emission tomography; PET; Down's syndrome; amyloidosis.

Sequences AAW45962-6 represent a fragment of the amyloid beta peptide
KLUVFF with an amino acid residue replaced with alanine. The invention
relates to the use of peptide compounds for inhibition of polymerisation
of amyloid beta peptide (ABP), as model substances for synthesis of
ABP-ligands for inhibition of polymerisation of ABP, as a tool for the
cidentification of other organic compounds with similar functional
properties, or as ligands in positron emission tomography. The peptides
may be used in treatment of amyloidosis, especially in treatment of
Alzheimer's disease associated with amyloidosis, for treatment or
prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch
C type) or for the prevention of fibril formation of human amyloid
protein. They can also be used for identifying other molecules with
similar properties and/or as ligands for detection of amyloid deposits

Use of new and known peptide(s) for inhibition of polymerisation of amyloid beta peptide - e.g. for treatment of Alzheimer's disease or Down's syndrome associated with amyloidosis.

Example 1; Figure 2C; 31pp; English.

          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

T.cell receptor delta chain MLC17, spleen - mouse (fragment)
C.Species: Mus musculus (house mouse)
C.Species: Was musculus (house mouse)
C.Date: 05-Oct-1989 #sequence\_revision 05-Oct-1989 #text\_change 30-May-1997
C.Accession: 132502
A.Title: T.cell receptor delta-chain diversity in peripheral lymphocytes.
A.Reference number: A31461; MUID:89128840; PMID:2783779
A.Accession: 132502
A.Accession: 132502
A.Status: preliminary; not compared with conceptual translation
A.Molecule rype: mRNA
A.Residues: 1-34 < LAC
C.Superfamily: immunoglobulin V region; immunoglobulin homology
C.Keywords: T-cell receptor 132502

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-09-867-847-15

GENERAL INFORMATION:
APPLICANT: Kiessling, Laura L.
APPLICANT: Murphy, Regina M.
TITLE OF INVENTION: INHIBITORS OF BETA-AMYLOID TOXICITY
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSE: Quarles & Brady
STREET: 411 East Wisconsin Avenue
CITY: Milwaukee
STATE: Wisconsin
COUNTRY: U.S.A.
ZIP: 53202-4497
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/970,833
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match 100.0%; Score 4; DB 3; Length 4; Best Local Similarity 100.0%; Pred.
